ABOUT ME

Computer Science Engineer and **Full Stack Developer** with a comprehensive vision of software development. My education at UCI provided a solid engineering foundation, which I have evolved by building complete solutions with **Symfony 7/8**, **Spring Boot 3** and modern architectures, always thinking about the final product.

I am motivated by transforming ideas into functional, clean and efficient products, taking responsibility for the entire cycle: from data modeling and business logic to the user interface and deployment. I have worked in enterprise environments (Local Development Center, 2021–2024) and on high-complexity independent projects, such as banking queue systems (**SGR-Turnos**) and SaaS platforms with **Stripe**, **OAuth2** and **2FA**, where I have acted as architect and lead developer.

My technical expertise covers both backend (Java/Spring Boot, PHP/Symfony, Doctrine ORM) and modern frontend (Tailwind CSS, Alpine.js, React, Twig, vanilla JavaScript). This versatility allows me to make decisions that balance performance, maintainability and user experience, adapting to the needs of each project without losing sight of the overall vision.

I am currently pursuing a **Master's in Applied Informatics** to deepen my knowledge in distributed architectures and high-concurrency systems, convinced that continuous learning is the engine that drives innovative and scalable solutions.

EXPERIENCE

Full Stack Developer · Freelance

2024 — Present

Independent Projects

- **SGR-Turnos**: banking queue system with Symfony 8, JWT, rate limiting, auditing and Excel export.
- **ComercioLocal**: SaaS e-commerce with Stripe, OAuth2 (Google/Facebook), 2FA and Redis.
- Development of RESTful APIs, microservices with Spring Boot and Docker.

Backend Developer

2021 — 2024

Local Development Center

- Development and maintenance of web applications with Java / Spring Boot and PHP / Symfony.
- Frontend development with HTML5, CSS3, JavaScript and Tailwind.
- Agile methodologies (Scrum), Git version control and technical support.

Software Development Intern

2018 — 2021

University of Informatics Sciences (UCI)

- Academic projects with Java, PHP and MySQL.
- Application of design patterns and best practices under supervision.

TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

PHP 8.x Symfony 7/8 Java 17+
Spring Boot 3 JavaScript SQL
Python

FRONTEND (INTERMEDIATE)

HTML5/CSS3 Tailwind Alpine.js
React Twig / Stimulus

DEVOPS & CLOUD

Docker Nginx/Apache Redis
CI/CD

ARCHITECTURE & SECURITY

JWT / OAuth2 2FA
Microservicios (Kong) Stripe
Rate Limiting

AI-ASSISTED DEVELOPMENT

ChatGPT / Claude GitHub Copilot
Prompt Engineering

LANGUAGES

Spanish Native
English Basic (A2)

CLEAN CODE · SCALABLE
ARCHITECTURE · SECURITY

EDUCATION

Master's in Applied Informatics

Universidad José Martí (UNISS)

Specialization in distributed architectures and high-concurrency systems.

2025 — Present

Computer Science Engineering

University of Informatics Sciences (UCI)

Project-based education with emphasis on computing fundamentals, software engineering, databases and cutting-edge technologies.

2017 — 2022

FEATURED PROJECTS

SGR-Turnos **Symfony 8**

Banking queue management with JWT, rate limiting, auditing and Excel export.
(demo in development)

ComercioLocal **SaaS**

E-commerce platform with Stripe, OAuth2, 2FA, shopping cart and admin panel.
islamarket.aserenet.com

app_almacen **Symfony 7**

Inventory control, PDF invoicing (dompdf) and metrics dashboard.
github.com/Christianrvdv/app_almacen

Auth System + JWT Symfony

JWT authentication, Voters, audit logging and unit tests.

github.com/Christianrvdv/auth-system

Library Microservices Spring Boot

API Gateway (Kong), Eureka, asynchronous communication.

github.com/Christianrvdv/sistema-biblioteca-microservicios

BANCEC App Android

Magnetic card request with QR (ZXing), Excel export and statistics.

github.com/Christianrvdv/SolicitudtarjetaBANDEC
